

Aerospace Manufacturer Tetra & Duo Solution

Problem A major aerospace and military equipment manufacturer needed a solution to a space problem in its manufacturing facility in Irvine, CA. The manufacturing floor is divided by large machinery and racking. Supervisory desk space is at a minimum and scattered throughout the large plant. The desks are generally used for reference materials and so small that there is no room for any computer equipment.

Solution We incorporated several elements from the Axcess™ line of Tetra and Duo monitor Support Systems (TSS & DSS) for our dealer in Burnsville, MN. We combined the DSS Articulating Monitor Arm and the DSS Articulating Keyboard Tray with a heavy-duty TSS 33" Post that can be bolted through the edge of the desk. In addition, a TSS Wall Mount could be used instead to secure the arms directly to machinery when no desk space was available. These unique systems provide standing access to the computer system and take up very little room. The articulat-

ing arms extend for easy access and fold to save even more space.

The manufacturer was thrilled with this solution and after testing for suitability ordered 120 of the 3-piece systems and has since reordered 25 more.

Product *The Axcess Tetra and Duo Support Systems can be utilized together solve difficult space problems and provide total support of one or multiple monitors and computer accessories. They can also be combined with Slatwall rails plus Slatwall and More Space accessories to completely organize the workspace.*

Axcess™ products can provide your business with unique, high-quality niche and mainstream solutions that will differentiate you from your competition. Contact Sandy d'Emery at morespace@npsg.com or 732-625-8427 for information that can improve your ability to successfully solve clients space, storage and filing problems.
