

## **The Blood Connection Greenville, SC**

**Problem** The Blood Connection is a large, ultra modern blood processing facility that handles large quantities of blood and blood-related products on a daily basis. They are constantly upgrading and changing the facility to handle ever-increasing quantities and demand for blood, platelets and serum.

Modular Millwork™ was specified for their labs and desks since it is ideally suited with its anti-bacterial work surfaces and ability to be reconfigured with a minimum of downtime. The lab counters, tables and desk tops also needed to be completely clean of clutter and all monitor and space-organizing solutions had to be easily reconfigurable.

**Solution** The Axcess™ Tetra Support System (TSS) for LCD monitors from the "More Space" program. The TSS features military-grade durability for 24/7/365 use; 4 vertical slots per post that will hold one or multiple monitors; 7

different attachment systems; easy adjustability for user comfort, a quick-release system so monitors can be swapped out in seconds; and can be easily reconfigured.

The TSS can also be combined with our Slatwall system which consists of extruded aluminum rails which lock into the slots. Slatwall accessories like pencil cups, paper trays and other desk organizing products are made of powder-coated steel and designed to keep work surfaces neat and organized. The TSS posts also accept custom accessories like the above pictured Plexiglas anti-splatter shields and acrylic dispensing tools for labels and barcode applications.

**Axcess™** Interested? Axcess products can provide you and your staff with exclusive, high-quality, multi-functional solutions that will differentiate you from the competition. Contact Sandy d'Emery at 732-625-8427 or [morespace@npsg.com](mailto:morespace@npsg.com) for more information.
