

Dental Practice A Tetra Solution

Problem: The dental and orthodontia practice environments have to be both ergonomic and functional. New technologies are impacting these practices with the introduction of inter-oral cameras, digital radiology, dental internet technology, virtual smile and dental rebuilding, photo sampling, and even in-chair entertainment. LCD monitors with manual and touch-screen methodology need to be positioned for easy, efficient access for both operator and patient.

Solution: The Tetra Support System (TSS) provides 24:7:365 military-grade durability with superior adjustability and ease of use. The TSS can be mounted on a countertop, the ceiling or on a wall. The articulating arm extends from 2" to 17-3/4" and is easily adjusted for height. Cable

management is exterior for easy access and the Quick Release option allows for maintenance or replacement of the monitor in seconds. The TSS can also be combined with the Slatwall System which combines extruded aluminum rails and Slatwall accessories to completely organize the workspace all at a very reasonable price.

Axcess: Interested? Axcess™ products can provide you and your staff with unique, high-quality and totally functional niche and mainstream solutions that will differentiate you from your competition. Contact Sandy d'Emery at morespace@npsg.com or 732-625-8427 for information that can improve your customers' efficiency and productivity by organizing their workspace and solving their storage problems.
